WellSharp – Well Control Training and Assessment

Industry Effort:
By the industry, for the industry

WellCAP Advisory Panel  Well Control Committee  Industry Workgroups

IADC’s WellSharp™ program:
A complete root and branch rebuild of well control training
WellSharp Summary

• Focus on training for all personnel involved with Well Control and ensuring that that training is commensurate with their role and responsibilities.
• Expanded course levels in line with OGP 476 recommendation to tailor training to the requirements of specific roles and responsibilities.
• Centralized electronic testing and grading to ensure integrity and international uniformity.
• Immediate test results with missed question learning objective guidance provided to Instructors for each student.
• Improved instructor qualifications.
• Continuous training to maintain currency and reduce skill fade.
WellSharp has been developed by the industry for the industry.
WellSharp is designed to address the criticisms of existing well control training programmes.
The ability of the industry to argue its case globally and effectively in the twenty first century will depend on its reputational strength which, in turn, depends on operational excellence.
WellSharp will make an important contribution to operational excellence and is a key component of the IADC’s wider strategic plan to catalyze improved performance.
Workforce Attraction and Development Program
Providing Pre-Qualified, Pre-Trained Candidates

Collaborative effort among IADC, colleges, and industry to:

• Attract and screen candidates
• Expedite building of qualified labor pool of potential new employees
• Deliver career development pathways and career guidance
